

# INTRODUCING NEXT GENERATION **ISOCAST 9000 SERIES**

Enabling high early strength and stabilization for precast manufacturers.

ISOCAST 9000 Series is a next-generation high performing PCE Superplasticizer range with a greater initial dispersion, better concrete surface finishing and higher early strength especially with the use of low carbon cements.

It enables higher production process speed and high-quality precast elements.

- New technology – new generation
- More initial dispersion performance
- Higher Early Strength Development especially with low carbon cements
- Additional strength boosting technology
- Higher process speed
- Better surface finishing through additional homogenizer technology
- Integrated sedimentation protector
- Part of CEMEX Vertua Admixtures range

## Enabling energy efficiency

As part of our wider Future in Action strategy, the Vertua® Admixtures range enables sustainable urbanisation and low carbon concretes.
